WHY SO MANY FARMERS HAVE A SHEDS4U STORAGE SHED

Expensive farm equipment is an investment that demands protection from the elements and prying eyes. Broad 16 metre spans and we can go bigger – just talk to us) allow you to plan for the headroom and width to get the biggest agricultural machinery in. Add in the choice of fully enclosed or open bays, and you'll quickly see why a Sheds4U Storage shed makes so much sense.

There's more too: bird-proof purlins keep the damaging mess off machinery or livestock and lower the risk of fire from discarded nesting material.

Strong construction, 50 years durability and the ability to design your shed for different uses and varying seasonal conditions mean you get the shed you need, and it'll be part of your farm for your kids' kids to use.

Our sheds have withstood the worst the NZ weather can throw at them for years and years. Tried and tested is an understatement.

We can help with all the consents needed to keep the process flowing smoothly.

Keep acidic, damaging bird mess off your expensive machinery, lessen the presence of lice and lower fire-risk from discarded nesting material.

Our clearspans mean room to manoeuvre for machinery or livestock easily.

“Sheds4U supplied a kitset for our barn. They were easy to deal with, good communicators, great price and assisted us with consents for a seamless build. I would recommend them any day, all the way, to anyone!”

— Johan Strydom

Frequently asked questions

Can I build my workshop myself?

Of course you can! The fella behind SHEDS4U spent years on the tools, so our kits are specifically designed to cater for every skill level, from handy-about-the-house guys to professional builders. In fact, professional builders love our kits because they're so easy to construct.

Will I need a building consent?

For buildings of workshop size, the answer is yes; any building over 30m² does (or 110m² in a rural setting – download the <brochure> to read more). But we've had heaps of experience dealing with councils, so chat to us about handling this for you.

Can my workshop have a concrete floor?

Yes! A SHEDS4U workshop doesn't need a concrete floor for structural integrity, but it's an easy add-on before or after the workshop is built. Talk to us about what thickness of concrete floor will best suit your workshop.

How secure can I make my workshop?

As secure as you like! From lockable thick steel roller doors large enough to get the real big stuff in and out to open bays if it's more of a farm set-up, how your workshop works is up to you.

Our Process

Sales Team

Work alongside our sales team to get an approved design and quote.

Plans Drawn

We get our design team to draw up plans.

Engineer

The plans are approved by an engineer who issues a PS1.

Consent

Building consent lodged with council.

Order

Building consent approved.

Delivery

Kit delivered to site.
